This cartographic symbol font has been designed for use in the 'explorer' map series covering popular tourist destinations in the Asia/Pacific region.

The font has been designed to have a foreground and a background colour. To make best use of this a 'blank' character has been included so that it can be given a different colour and placed behind the symbol character.

Play around with different variations, you may even like the black and white style.

If you plan to use this font in a printed or electronic format, all I ask is that you acknowledge CartDeco Cartographics as the source.

This product is freeware and is yours to distribute freely if you wish, however I ask that when you distribute this font, please attach all accompanying readme files, so that others are aware of their obligations.

Enjoy using this font and if you have any comments or further suggestions for symbol designs you can email me at:
